

JASON – Plaque Psoriasis

Despite lifelong struggle, Jason is mapping out a bright future.

Since the age of six, Jason has struggled with severe plaque psoriasis. The first signs appeared in the form of a sore on his leg from a new pair of cowboy boots his parents had given him. Rather than healing like healthy skin, the sore evolved into a scaly skin “plaque.” Within months, nearly 80 percent of Jason’s body was covered in red, itchy, sometimes painful lesions on his scalp, face, legs, arms, and torso.

Today, Jason works in the hospitality industry and manages a restaurant for a major restaurant chain. **INNERSTATE** is a moving story of Jason’s continuing struggle with his disease and the impact of his family, his friends, and his doctor.
